

Government of India Ministry of Chemicals and Fertilizers Department of Chemicals and Petrochemicals

INTRODUCTION

he chemical industry and its ability to understand and modify the interaction of different elements in order to produce desired commercial products, has significantly contributed to the development of human life. Industry contributes significantly to almost every key area of human development - be it food, healthcare or energy. The industry has been constantly responding to needs of growing population ranging from access to food to medical care to increased connectivity by providing us with (developments across) fertilizers, pesticides, pharmaceuticals, plastics, insulation, wiring, battery chemicals, adhesives, etc.

Heading into 2023, the chemical industry is in a strong financial position. The year ahead could be a turning point when companies emphasize the

long-term viability of product portfolios in the context of sustainability in a move toward asset-oriented deal-making.

Digital implementation is changing the decision-making landscape of chemical producers. However, the near-term focus will be on stabilizing current platforms and capabilities, with the intent to monetize the current investment pool before expanding to newer areas. Producers may increasingly use digital technologies to empower materials innovation and expedite low-cost formulations by evaluating, optimizing, and assimilating ingredient recipes and domain knowledge.

With the support of the Indian government, the chemical industry in India witnessed significant growth. The industry has been modernizing over time through the development of novel molecules, technological advancements, improvement in product quality and launch of new product profiles to become a contemporary world-class chemical industry prepared to face international competition. Even at a time of increased global unpredictability, the sector remains a desirable Centre for prospects. Global dynamics that are affecting the chemical industry would present lucrative opportunities for the Indian chemical sector in the near future. The strategic choice to prioritize and realize this value-creation potential would determine the direction of India's chemical sector and its trade performance in the future.

We are happy to announce the "3rd edition of India: Global Chemicals and Petrochemicals Manufacturing Hubs" (GCPMH) to be held on 27th - 28th July 2023 at Hotel Le Meridien, New Delhi to be jointly organised by Department of Chemicals & Petrochemicals, Ministry of Chemicals & Fertilizers, Government of India with Federation of Indian Chambers of Commerce and Industry (FICCI).

In line with the maiden editions, we are glad to offer this opportunity once again to the chemicals and petrochemicals industry to interact and forge alliances in pursuance to the objective of making India as Global Manufacturing hub with "Sustainability and Circularity". The ongoing geopolitical scenario offers great opportunities for robust and stable economy like India to forge new alliance for the growth and development of Chemicals and Petrochemicals sector. India is among the best performing economies in spite of Global head winds.

Under the dynamic leadership of Hon'ble Prime Minister, India is hosting the G-20 presidency which enable us to showcase our leadership to the world and highlights our strengths. Indian Chemicals & Petrochemicals play a key role not only in the growth of Indian Economy but also in the Global arena, as we are heading on the upward trajectory, soon we will among the top Nations in terms of size and scale in this sector.

Keeping in view the above factors, we are expecting an overwhelming participation from many leading countries with large number of national and international delegates in respective forums. The summit will bring together global leaders, CEOs, government authorities, key industry players, state governments and subject matter experts from around the world in an open dialogue, under one roof to discuss the key developments, sectoral issues and the way forward with respect to Indian chemicals and petrochemicals industry. It will help to develop possible strategies, sharing insights, exploring opportunities and challenges which will shape the Chemicals and Petrochemicals Industry in India and across the world in the next decade.

Dr Mansukh MandaviyaHon'ble Union Minister for Chemicals &
Fertilizers and Health & Family Welfare
